* A user is an individual or a member of a research team who is granted access to resources at a user facility through an approved peer-reviewed proposal.

• Each user of a BES scientific user facility is reported annually in one of two categories: On-Site User or Remote User. An On-site user is an individual who is physically present at the facility to conduct research on an approved research proposal. This is the primary category of users, who typically have been issued an access badge after completing facility requirements for registration, training, safety documentation, etc., under a user access agreement. A Remote User is an individual who remotely access the facility to produce data through computer access, or by shipping samples to facility scientist for data measurements, or by receiving custom-manufactured materials, tools, or devices from the facility scientists because the facility has unique or unusual capabilities to fabricate. For all three types of Remote Users, only one user is to be counted per proposal regardless of the number of co-investigators, and only if there was no On-Site User under the same proposal.

• For annual totals, an individual is counted as 1 user at a particular facility no matter how often or how long the researcher conducts experiments at the facility during the fiscal year. Users do not include individuals who pay to have specialty services performed or visit the facility for tours or educational purposes. Users also do not include researchers who collaborate on the proposal or subsequent research papers but do not conduct experiments at the facility.

**The High Flux Isotope Reactor (HFIR) was down for maintenance, safety standowns, and upgrades for significant periods during FY01–FY07. HFIR's users include researchers who perform neutron scattering (figures shown above). HFIR also delivers services such as neutron activation analyses and materials irradiation.

***The NSLS ceased operations at the end of FY14. The newly constructed NSLS II transitioned from a construction project to operations in FY15. FY16 is the first full year of operations for NSLS-II.
