

John F. Wilkerson is the John R. and Louise S. Parker Distinguished Professor of Physics at the University of North Carolina, at Chapel Hill. He also holds a Joint Faculty Appointment, at Oak Ridge National Laboratory and serves as an Associate Director, of the Triangle Universities Nuclear Laboratory in Durham NC. His research interests include neutrino physics and astrophysics, searches for rare processes, and precision tests of weak interactions. He is the principal investigator of the MAJORANA DEMONSTRATOR searching for neutrinoless double-beta decay in an array of enriched ^{76}Ge detectors. He is also involved in the Karlsruhe tritium beta-decay neutrino mass experiment (KATRIN) and the HALO Helium and Pb supernovae detector experiment. Wilkerson earned his Ph.D. in physics in 1982 at the University of North Carolina. He held a postdoctoral fellowship at Los Alamos National Laboratory before becoming a staff member in 1985. He was Professor of Physics at the University of Washington from 1995-2008. Wilkerson is a fellow of the American Physical Society (APS) and the American Association for the Advancement of Science. He currently serves as the Chair-Elect of the APS Division of Nuclear Physics.
