

Jorge Piekarewicz is a Professor of Physics at Florida State University. He received his BSc from the Universidad Nacional Autonoma de Mexico in 1981 and his PhD from the University of Pennsylvania in 1985. Jorge was a postdoctoral fellow at Caltech and at Indiana University before joining Florida State University in 1990. Jorge's main research interest is the behavior of nuclear matter under extreme conditions of density, such as those found in the interior of neutron stars. More specifically, he aims to use physical observables that may be determined in the laboratory to constrain the structure, dynamics, and composition of neutron stars. Jorge has published more than 100 peer reviewed articles and has mentored high school, undergraduate and graduate students as well as postdoctoral fellows. He was named fellow of the American Physical Society in 2005.
