

Michael Wiescher is Freiman Chair Professor of Physics and Director of the Joint Institute for Nuclear Astrophysics at the University of Notre Dame, Michigan State University, and the University of Chicago as well as Director of the Nuclear Science Laboratory at the University of Notre Dame. His research involves experimental and theoretical studies in the nuclear physics of quiescent and explosive stellar burning, addressing questions about the origin of the elements in the universe and the fate of matter at extreme hot or dense environments. For his accomplishments he has received the 2003 Hans Bethe Prize of the Division of Astrophysics and Nuclear Physics of the American Physical Society. He is a Fellow of the APS (1993) and the AAAS (2010). Michael Wiescher and his students have published more than 300 peer reviewed papers on a variety of topics in the field of nuclear astrophysics. He has mentored more than 40 PhD students and 16 postdoctoral fellows. He received his PhD in Nuclear Physics from the University of Münster, Germany in 1980, and was a postdoctoral fellow at Ohio State University, Caltech, and the University of Mainz, Germany prior to joining the faculty at Notre Dame in 1986.
