

Roy J. Holt is a Distinguished Fellow at Argonne National Laboratory where he is a member of the Medium Energy group and served as group leader from 2000 to 2011. His present research interests include the structure of the nucleon, tests of the Standard Model, nuclear astrophysics and a search for dark photons. He was the 2005 recipient of the Tom W. Bonner Prize of the American Physical Society. He is a Fellow of the American Physical Society and the Institute of Physics (U.K.). He served on the Nuclear Physics 2010 Committee (NP2010) of the National Academy of Sciences to prepare the decadal study of nuclear physics. He has served on scientific program advisory committees for the Relativistic Heavy Ion Collider at Brookhaven National Laboratory, the Los Alamos Meson Physics Facility, the Stanford Linear Accelerator Center, the MIT-Bates Linear Accelerator Center, the Indiana University Cyclotron Facility and the Thomas Jefferson National Accelerator Facility (Jefferson Lab); on NSAC subcommittees; review panels for the U. S. Department of Energy, the National Science Foundation (U. S.), the International Science Foundation and the National Science and Engineering Research Council (Canada); and on editorial boards of Physical Review C, Nuclear Physics A and the Journal of Physics G. He received his PhD in Physics from Yale University in 1972, and was a research staff physicist at Yale before joining Argonne as a staff member in 1974. During 1994-2000, he served as professor of physics at the University of Illinois at Urbana-Champaign where he was also a Director of the Nuclear Physics Laboratory. He has more than 172 peer reviewed publications.
