

Lætitia H. Delmau is a radiochemist in the Nuclear Materials Processing group at Oak Ridge National Laboratory(ORNL) at the Radiochemical Engineering Development Center (REDC). She originally joined ORNL as a postdoctoral researcher in the Chemical Separations Group (CSG) in the Chemical Sciences Division in October of 1997 and was hired in 2000. In 2014, she moved from CSG to NMPG in the Nuclear Security and Isotope Technology Division. She received her Ph.D. in physical chemistry from the University Louis Pasteur of Strasbourg, France in 1997. Lætitia currently conducts research on a wide range of project within the Pu-238 Production Program, the Cf-252 Program, the Critical Material Institute, and the Fuel Cycle Research and Development Program (STAAR), focusing on separations, solvent extraction or ion exchange primarily. During her many years in CSG, she worked primarily on the Caustic-Side Solvent Extraction system to remove Cs-137 from the high level waste stored at the Savannah River Site. She is active in several professional organizations and currently serves as Chair of the Nuclear Chemistry and Technology Division of the ACS. She has also authored several scientific papers published in refereed journals (h index = 19) and holds 6 patents.
