

**Yury Kolomensky** is a Professor of Physics at the University of California, Berkeley and a Faculty Senior Staff Scientist at the Nuclear Science Division of the Lawrence Berkeley National Laboratory. His research focuses on sensitive searches for new physics effects at low energies, in particular tests of fundamental symmetries in leptonic and hadronic transitions. His current focus is on searches for lepton number violation in neutrinoless double beta decay and lepton flavor violation in muon to electron conversion. Professor Kolomensky received the 1998 APS Dissertation Award in Nuclear Physics for his contributions to the precision measurement of the spin structure of the neutron (SLAC E154 experiment), and was elected a Fellow of the American Physical Society (2006). He has served in various leadership positions in the BaBar, E158, CUORE, and Mu2e collaborations, on the SLAC User Organization Executive Committee (2003-2005), and is presently a US Spokesperson for CUORE. Prof. Kolomensky is a co-author of over 590 journal publications. He completed his undergraduate education at St. Petersburg Technical University in Russia, received his Ph.D. from the University of Massachusetts, Amherst in 1997, and was a Robert A. Millikan Postdoctoral Scholar at Caltech before joining the Berkeley faculty in 2001.
