

Krishna Kumar is the Gluckstern Professor of Physics at the University of Massachusetts, Amherst. He received his PhD from Syracuse University in 1990 and an MSc from the Indian Institute of Technology, Bombay, India in 1984. He holds the Distinguished Gluckstern Professorship in the Department of Physics at UMass, Amherst. His research involves the precision measurements of scattering reactions using spin-polarized high energy electron beams, and searching for rare radioactive decays. He has been the leader of three electron-scattering experiments for which the published results are considered famous papers (250+ citations). He is a Fellow of the American Physics Society (2005). He was a recipient of the 1990 Peter Demos Dissertation Award and the 1995 DOE Outstanding Junior Investigator Award. He has served on numerous advisory panels including the 2015 Long Range Plan Writing Group and chairing the 2011 NSAC subcommittee on Neutron Physics.
