### I. (?) **Description of Proposed Action:**

Two laboratory facilities are to be operated under this effort in Building #205 of the Chemical Sciences and Engineering Division (CSE), a laboratory-scale battery cell fabrication facility and a battery cell post-test analysis facility. The focus of both facilities will be advanced lithium-ion battery technologies. These technologies typically contain positive electrodes coated on aluminum foil comprised of a lithiated transition metal (e.g. nickel, manganese, or cobalt) oxide active material powder and high surface area carbon additive, held together by a polymer binder. The negative electrode is typically a carbon active material powder coated on copper foil with polymer binder. A porous polymer separator (e.g. polyethylene) is used to separate the electrodes. The cell layers are either wound or stacked and placed into a metal container or foil/polymer pouch. Current collector tabs are attached to the foils, an organic solvent electrolyte (e.g. lithium hexafluorophosphate in a mixture of organic carbonates) is added, and the cell is sealed.

In the laboratory-scale battery cell fabrication facility small, less than 3Ah, prototype cells will be fabricated and tested. Electrodes will be coated, using a solvent based coating process, on laboratory coating equipment designed for lithium-ion cell electrodes. The prototype cells will then be assembled using hand operated cell fabrication equipment. Because of the battery materials sensitivity to moisture, all of these operations are carried out in a state-of-the-art dry room or inert atmosphere glove box. X-ray diffraction will be used to help screen the battery active material powders before cells are assembled. The limited number of prototype cells will undergo electrochemical and thermal testing and evaluation.

The battery cell post-test analysis facility will be used to dismantle cells for diagnostic purposes after electrochemical testing and evaluation has been conducted. The facility is designed to accommodate small prototype cells, as described above, to full size electric vehicle cells that may easily have 100Ah of capacity. All cell-opening, component-manipulation, and diagnostic activities will be performed in an inert atmosphere, provided by glove boxes. Analytical diagnostic instruments used for examining the components include Fourier Transform Infrared Spectroscopy (FTIR), Raman spectroscopy, a thermogravimetric analysis unit coupled to a gas chromatograph/mass spectrometer and an optical microscope. It is important to note that the sample preparation (cell opening, disassembly, metallography) area will be separated from the characterization area. Battery cycling equipment will be used to characterize selected electrode sections.

**II. (2)Description of Affected Environment:** All proposed activities will be conducted indoors in building 205 in existing bench-scale laboratory spaces. The laboratory-scale battery cell fabrication facility will be in lab A-141 and the battery cell post-test analysis facility will be in J-102.

**III. (2)Potential Environmental Effects:** (Attach explanation for each "yes" response. See Instructions for Completing Environmental Review Form)

**A. Complete Section A for all projects.**

1. (2)Project evaluated for Pollution Prevention and Waste Minimization opportunities and details provided under items 2, 4, 6, 7, 8, 16, and 20 below, as applicable Yes X No

2. (2)Air Pollutant Emissions Yes X No

Approximately 10 L of N-methyl-2-pyrrolidinone (NMP) will be released from the facilities annually through laboratory hoods.

3. (2)Noise Yes      No X

4. (2)Chemical Storage/Use Yes X No

The following is a list of the hazardous chemicals that would likely exist in the facilities at any given time.

1 Liter of N-methyl-2-pyrrolidinone (NMP)

1 Liter of 1.2 Molar lithium hexafluorophosphate in ethylene carbonate/ ethyl-methyl-carbonate

2 Liters of ethanol

2 Liters of isopropanol

1 Liter slurry of graphite powder suspended in NMP with polyvinylidene (PVDF) binder

1 Liter slurry of lithiated nickel-cobalt-manganese oxide powder suspended in NMP with polyvinylidene (PVDF) binder

Some of the slurries may contain up to 8 wt % acetylene black powder suspended in binder (non-dispersible)

5. (2)Pesticide Use Yes      No X

6. (2) Polychlorinated Biphenyls (PCBs) Yes      No X

7. (2) Biohazards Yes      No X

8. (2)Liquid Effluent (wastewater) Yes      No X

9. (2)Waste Management

- a) Construction or Demolition Waste Yes      No X

- b) Hazardous Waste Yes X No

The proposed activities may involve generation of hazardous waste. The waste will be accumulated, managed and documented in accordance with the ANL Waste Handling Procedures Manual. Generators will consult with Waste Management personnel before the generation of unusual or difficult waste streams. Personnel who generate waste and

those who prepare waste requisitions are required to complete the required training in accordance with Argonne requirements.

- |                              |                                         |                                        |
|------------------------------|-----------------------------------------|----------------------------------------|
| c) Radioactive Mixed Waste   | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| d) Radioactive Waste         | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| e) PCB or Asbestos Waste     | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| f) Biological Waste          | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| g) No Path to Disposal Waste | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| h) Nano-material Waste       | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/>            |

The proposed activities may involve generation of nano-material waste. The waste will be accumulated, managed and documented in accordance with the ANL Waste Handling Procedures Manual. Generators will consult with Waste Management personnel before the generation of unusual or difficult waste streams. Personnel who generate waste and those who prepare waste requisitions are required to complete the required training in accordance with Argonne requirements.

- |                                                                                                               |                                         |                                        |
|---------------------------------------------------------------------------------------------------------------|-----------------------------------------|----------------------------------------|
| 10. (?) Radiation                                                                                             | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| 11. (?) Threatened Violation of ES&H Regulations or Permit Requirements                                       | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| 12. (?) New or Modified Federal or State Permits                                                              | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| 13. (?) Siting, Construction, or Major Modification of Facility to Recover, Treat, Store, or Dispose of Waste | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| 14. (?) Public Controversy                                                                                    | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| 15. (?) Historic Structures and Objects                                                                       | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| 16. (?) Disturbance of Pre-existing Contamination                                                             | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |
| 17. (?) Energy Efficiency, Resource Conserving, and Sustainable Design Features                               | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/>            |

These factors will be considered in the planning stage of the proposed research activities.

**B. For projects that will occur outdoors, complete Section B as well as Section A. N/A**

- |                                                                                             |                              |                             |
|---------------------------------------------------------------------------------------------|------------------------------|-----------------------------|
| 18. (?) Threatened or Endangered Species, Critical Habitats, and/or other Protected Species | Yes <input type="checkbox"/> | No <input type="checkbox"/> |
| 19. (?) Wetlands                                                                            | Yes <input type="checkbox"/> | No <input type="checkbox"/> |
| 20. (?) Floodplain                                                                          | Yes <input type="checkbox"/> | No <input type="checkbox"/> |
| 21. (?) Landscaping                                                                         | Yes <input type="checkbox"/> | No <input type="checkbox"/> |
| 22. (?) Navigable Air Space                                                                 | Yes <input type="checkbox"/> | No <input type="checkbox"/> |
| 23. (?) Clearing or Excavation                                                              | Yes <input type="checkbox"/> | No <input type="checkbox"/> |
| 24. (?) Archaeological Resources                                                            | Yes <input type="checkbox"/> | No <input type="checkbox"/> |

25. (?)Underground Injection Yes ☐ No ☐
26. (?)Underground Storage Tanks Yes ☐ No ☐
27. (?)Public Utilities or Services Yes ☐ No ☐
28. (?)Depletion of a Non-Renewable Resource Yes ☐ No ☐

**C. For projects occurring outside of ANL complete Section C as well as Sections A and B. N/A**

29. (?)Prime, Unique, or Locally Important Farmland Yes ☐ No ☐
30. (?)Special Sources of Groundwater (such as sole source aquifer) Yes ☐ No ☐
31. (?)Coastal Zones Yes ☐ No ☐
32. (?)Areas with Special National Designations (such as National Forests, Parks, or Trails) Yes ☐ No ☐
33. (?)Action of a State Agency in a State with NEPA-type Law Yes ☐ No ☐
34. (?)Class I Air Quality Control Region Yes ☐ No ☐

**IV. (?)Subpart D Determination: (to be completed by DOE/ASO)**

Are there any extraordinary circumstances related to the proposal that may affect the significance of the environmental effects of the proposal? Yes ☐ No ☒

Is the project connected to other actions with potentially significant impacts or related to other proposed action with cumulatively significant impacts? Yes ☐ No ☒

If yes, is a categorical exclusion determination precluded by 40 CFR 1506.1 or 10 CFR 1021.211? Yes ☐ No ☐

Can the project or activity be categorically excluded from preparation of an Environment Assessment or Environmental Impact Statement under Subpart D of the DOE NEPA Regulations? Yes ☒ No ☐

If yes, indicate the class or classes of action from Appendix A or B of Subpart D under which the project may be excluded. B 2.6, siting / operation of facilities for small scale R & D projects.

If no, indicate the NEPA recommendation and class(es) of action from Appendix C or D to Subpart D to Part 1021 of 10 CFR.

**ASO NEPA Coordinator Review: Ken Chiu**

Signature: Ken Chiu

Date: 3/31/10

**ASO NCO Approval of CX Determination:**

The preceding pages are a record of documentation that an action may be categorically excluded from further NEPA review under DOE NEPA Regulation 10 CFR Part 1021.400. I have determined that the proposed action meets the requirements for the Categorical Exclusion identified above.
