**NATIONAL ENVIRONMENTAL POLICY ACT (NEPA)
ENVIRONMENTAL EVALUATION NOTIFICATION FORM**

To be completed by "Applicant," i.e., organization with responsibilities for a "Federal action" involving application to DOE for a permit, license, exemption or allocation, or other similar actions. For assistance with this Form, refer to "Instructions for Preparing ISC-CH F-560, Environmental Evaluation Notification Form."

Solicitation/Award No. (if applicable): DE-SC-0021424

Organization Name: University of Kentucky Research Foundation (Lexington, Kentucky)

Proposed Action Title: Neutron Scattering Cross Sections: (n,n'), (n,n'gamma), and (n,gamma) Measurements

Total DOE Funding/Total Funding: \$197,605 (year1), \$175,000 (year2)

I. Project Description: (Use explanation pages if additional space is required)

A. Proposed Project/Action (if applicable, delineate Federally funded/Non-Federally funded portions)

Nuclear data, i.e., neutron scattering and attenuation cross sections, along with gamma-ray production rates, are required in many technical fields such as basic nuclear science, experimental design and analysis, medical treatment and dosimetry, the fission and fusion power industries, homeland security, non-proliferation, safeguards, and the interrogation communities. Members of this collaboration have surveyed needs documents and participated in numerous workshops to identify measurements for which the University of Kentucky Accelerator Laboratory (UKAL) can make significant contributions.

B. Would the project proceed without Federal funding?

Yes No

If "yes," use explanation page.

II. Description of Affected Environment: (Use explanation pages if additional space is required)

The measurements will be performed indoors in the University of Kentucky Accelerator Laboratory, a facility that has existed for approximately 59 years. The facility was specifically constructed to accommodate measurements of the proposed type.

IV.B.30 The laboratory utilizes tritium for neutron production as authorized by the University's Radiation Safety Committee, which operates under a Broad Scope license. Procedures reduce and contain contamination. Swipe tests are performed. Small quantities of mixed waste are generated as gloves, swipes, and cleaning wipes. Waste is disposed of by the Radiological Safety Program, which also services the University's Medical Center.

IV.B.31 The project involves using a positive-ion accelerator to generate neutrons and gamma rays. There are no hazards from the particle beam itself. The facility was constructed with thick, high-density concrete walls and lockable spaces to adhere to ALARA principles and minimize exposure to the users. Users receive radiation safety training prior to working in the facility. All personnel are issued appropriate dosimetry by the Radiation Safety Office. Personnel do not normally receive measurable dose
